Re: Amir Hejazi

I am writing to strongly recommend Amir Hejazi for possible employment at your company. I was pleased to have Amir's assistance in teaching multiple sections of EE330L (Fall 2012 through Spring 2014) and serving as a grader for me in EE430 (Fall 2012 & Spring 2013). His performance in doing these important tasks were exceptional. As the Graduate Teaching Assistance in EE330L, Amir sought guidance from me (as the coordinator for all EE330L) in terms of emphases, lab organization, and key educational goals. As my grader for EE430, Amir carefully reviewed the underlying principles associated with the assignments to be graded and then graded the submissions very conscientiously, in fact better than all my past graders. I miss having his support in my teaching assignments.

As reflected in his academic transcript, I believe that Amir is well prepared for employment that will utilize his academic expertise in digital signal processing. His master's thesis, done under Dr. Fred Harris, investigated the synchronization of wireless transmission signals. Amir's excellent work habits, respectfulness, and desire to complete all assignments in a timely and careful manner can be seen in his 3.76 GPA at SDSU. I believe that Amir will be a dependable, hard working, and welcomed employee. I hope that you will give him your utmost consideration. Feel free to call should you desire additional information.
